## SOFTWARE ENGINEER

Results-driven **Software Engineer** with over **7 years of experience** in software development & testing, ensuring high standards of quality, reliability, and performance across applications. Adept at both **development and testing**, with expertise in developing dashboards and creating end to end frameworks. Skilled in frameworks such as **React + Django** with proficiency in languages such as **JAVA, Typescript and JavaScript**. Experienced in **CI/CD pipelines** (Jenkins, GitHub Actions), cloud platforms including **AWS, IBM Hybrid Cloud, and Azure**. Expertise in developing scalable systems, implementing automation frameworks, integrating tests within DevOps pipelines, and ensuring the build and quality of software applications. Strong communicator with a knack for technical storytelling.

Experienced in **Agile Scrum Methodology** including Agile Testing. Skilled in defect tracking, root cause analysis, and continuous integration practices, ensuring software stability and performance. Proven ability to identify and resolve critical issues, providing thorough documentation and continuous improvements. Strong communication skills, attention to detail, and a proactive approach to enhancing testing processes.

## TECHNICAL SKILLS

**Programming Language:** JavaScript, TypeScript, JAVA, Python, SQL  
**Framework & Libraries:** React, Django, PostgreSQL, TestNG  
**Automation Tools:** Playwright, Postman, Cypress, JMeter, SoapUI  
**Management Tools:** JIRA, Trello, Power BI, Monday.com  
**Cloud/ Version Control:** Jenkins, AWS, GitHub Actions, Dynatrace, Docker, Azure DevOps  
**Testing:** Web, API, UI, Performance, Database, UAT

## PROFESSIONAL EXPERIENCE

### SOFTWARE DEVELOPER | Freelance | May'25 – Jan'26

Dubai - Remote

- Designed, developed, and deployed a **React-based web application** to capture **usage analytics, error logs, incident metrics, and billing data** across 10+ microservice components, improving system observability by **65%** and reducing manual reporting overhead by **50%**.
- Designed an end-to-end automation framework using **Cypress**. Involved in implementing end-to-end framework for **Functional and Non-Functional Testing**.

### TEST DEVELOPER | IBM INDIA PVT. LTD. | Jan'20 – April'24

Bangalore - India

**Growth Path:** Test Automation Engineer → Software Test Specialist → Test Developer

#### Key Achievements:

- Achieved a **\$100M cost avoidance** by identifying and resolving critical bugs in pre-release stages, ensuring timely, high-quality delivery of IBM's flagship product.
- Developed and scaled comprehensive end-to-end automation frameworks using Playwright, Cypress, and Selenium to validate RESTful APIs and modern UI components.
- Integrated automated test suites into Jenkins and Docker CI/CD pipelines, supporting containerized Kubernetes environments and enabling faster release cycles.
- Advocated for quality excellence in Agile environments by leading STLC cycles and managing release quality for Blue/Green Deployment scenarios.

### SOFTWARE TEST ENGINEER | EXPERIS IT | Jan'18 - Nov'19

Delhi NCR - India

#### Responsibilities:

- Executed comprehensive manual and automated test cases across web and mobile platforms, ensuring product quality and alignment with user stories in an Agile environment
- Collaborated with cross-functional teams to support end-to-end test planning, design, and execution, resulting in timely releases
- Participated in sprint planning and retrospectives, ensuring continuous improvements in testing processes
- Operated under Agile and Scrum frameworks to complete releases and well-organized sprints
- Authored and maintained well-organized, efficient, and successful manual test cases for the entire team

| Description:      | Developed and maintained a worldwide pricing analytics tool focusing on monthly model price trends, discounts, and gross profit analysis for validator/bundle products across affected countries.                                                                                                                                                                                                                                                                                                                                                                                                          |                                                  |
| Responsibilities: | Involved in implementing end-to-end framework for <b>Functional</b> and <b>Non-Functional Testing</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                  |
| Project:          | U-Ask Chatbot                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | CRM   AI & ML                                    |
| Description:      | Designed an end-to-end automation framework using Cypress. U-Ask is a generative AI-powered chatbot launched by the UAE Government to support residents and citizens with public services. It responds in Arabic and English using models like ChatGPT.                                                                                                                                                                                                                                                                                                                                                    |                                                  |
| Responsibilities: | Involved in implementing end-to-end framework for <b>Functional</b> and <b>Non-Functional Testing</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                  |
| Project:          | Stock Prediction Portal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Portfolio Management   AI & ML                   |
| Description:      | Designed and developed a full-stack web application using Django REST Framework and React.js, implementing RESTful APIs and integrating them seamlessly with a dynamic frontend interface. Built secure authentication using JWT tokens, ensuring protected access to user-specific data and routes. Leveraged React.js fundamentals to create responsive UI components and utilized Axios interceptors for efficient API communication and token management. Ensured robust routing with protected routes and implemented best practices for scalable, maintainable, and secure application architecture. |                                                  |
|                   | Frontend: React, Axios, React Router                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Backend: Django, Django REST Framework, JWT Auth |
